# 1 [Modeling value propositions in e-Business](#)

Alexander Osterwalder, Yves Pigneur

September 2003 **Proceedings of the 5th international conference on Electronic commerce**

Full text available:  [pdf\(139.53 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this paper we provide a conceptual approach to modelling value propositions. We argue that rigorous modelling in an ontological style could improve several aspects of business. Modelling and mapping value propositions helps better understanding the value a company wants to offer its customers and makes it communicable between various stakeholders. Using a common language (ontology) in defining a company's offering brings manager's mental models into a common form. Further, conceptually seized ...

This article describes the influence of a country's regulatory framework and availability of services on the management of an international network. © 1997 John Wiley & Sons, Ltd.

# 4 [The Jungle database search engine](#)

Michael Böhlen, Linas Bukauskas, Curtis Dyreson

June 1999 **ACM SIGMOD Record , Proceedings of the 1999 ACM SIGMOD international conference on Management of data**, Volume 28 Issue 2

Full text available:  [pdf\(382.61 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Information spread in in databases cannot be found by current search engines. A database search engine is capable to access and advertise database on the WWW. Jungle is a database search engine prototype developed at Aalborg University. Operating through JDBC connections to remote databases, Jungle extracts and indexes database data and meta-
